# NEVER DUPLICATED

POWERED BY  
**POLYON**<sup>®</sup>  
Controlled-Release Fertilizer

## **POLYON<sup>®</sup> Controlled-Release Fertilizer.** **Feeding YOUR Success.**

POLYON<sup>®</sup> is a radically different fertilizer concept - one that can deliver drastically better growing results for you. The key to the consistent, predictable release of POLYON<sup>®</sup> fertilizer is all in the exclusive, durable polymer membrane that coats each granule (our proprietary reactive-layer coating, or RLC) ensuring consistency and durability in every particle.

*Choose POLYON<sup>®</sup> and you will get guaranteed results backed by our POLYGRAPH<sup>®</sup> Guarantee.*

For more information, visit [www.harrells.com/polyon](http://www.harrells.com/polyon).

Every order of POLYON<sup>®</sup> fertilizer is subjected to a series of meticulous inspections, ensuring that coating evenness, thickness and proper nutrient release have been achieved.

It's a three-step process we call HTR: **Hold>Test>Release.**

## **HOLD**

All finished products are held before shipment to allow time for thorough testing.

## **TEST**

Each batch is tested for seven days at realistically hot climate conditions (86° F or 30° C) until top-quality results are achieved.

## **RELEASE**

After the products pass these tests - and only then - are they released for shipment.

*These exacting steps ensure that every POLYON<sup>®</sup> fertilizer bag leaves our facilities with the Harrell's stamp of approval, and that you receive high-quality products with unprecedented performance.*
